Integration Health

AI-Powered SAP Integration Error Analysis

- Filter the noise out of SAP integration logs.
- See the real error with its root cause and source.
- Solve an error once; repeats are answered instantly.

KEY BUSINESS BENEFITS

NOISE FILTERED OUT

Readable logs: Most messages are expected exclusions, and pre-screening sets them aside. In live use, 1,677 raw log lines came down to 72 real error types.

SOURCED ROOT CAUSE

Every fix is sourced: The root cause and fix steps arrive with the source they came from, so nothing is applied blindly.

SOLVED ONCE

Solution bank: A fix that works goes into the bank and answers the error instantly when it recurs; know-how stays with the team, not one person.

MANUAL LOG REVIEW VS. INTEGRATION HEALTH

Topic	Today	Integration Health
Noise	Expected exclusions look like errors	**Pre-screening separates real errors from noise**
Sources	Scattered across SAP Notes and Community	**Four sources in one panel, each fix with its source**
Know-how	Research restarts when the expert is away	**Knowledge lives in the solution bank**
Repeat errors	Researched again every time	**Answered instantly from the solution bank**
Personal data	Logs carry employee and organizational data	**Values are masked; the structure is kept**

WHAT INTEGRATION HEALTH DOES FOR YOU

01 Noise Filtered First
Real errors separated from expected exclusions.

02 Sourced Root Cause
Each fix step comes with its source.

03 Never Researched Twice
The solution bank answers repeat errors instantly.

04 Four Sources, One Panel
SE91, SAP Notes, KBAs, Community, and our bank.

05 Personal Data Masked
Values masked, structure kept; analysis intact.

06 When in Doubt, Data Stays In
Independent check; quarantined data isn’t shared.

07 No Separate Server
Runs on the İKSAP platform; reads SAP logs only.

08 Faster Onboarding
Know-how lives in the bank, not with one person.

Let’s sift through your logs together.

A short demo: We’ll filter the noise from a sample of your own logs, live.
